Digital Marketing Strategy 2

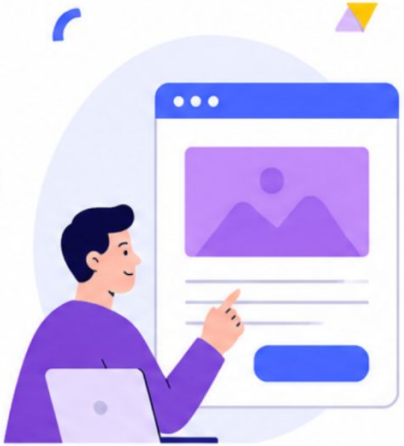

M2 - Inalco

Acquire → Convert → Retain → Grow

Attract the right people to your brand.

Turn visitors into customers.

Build relationships and keep customers coming back.

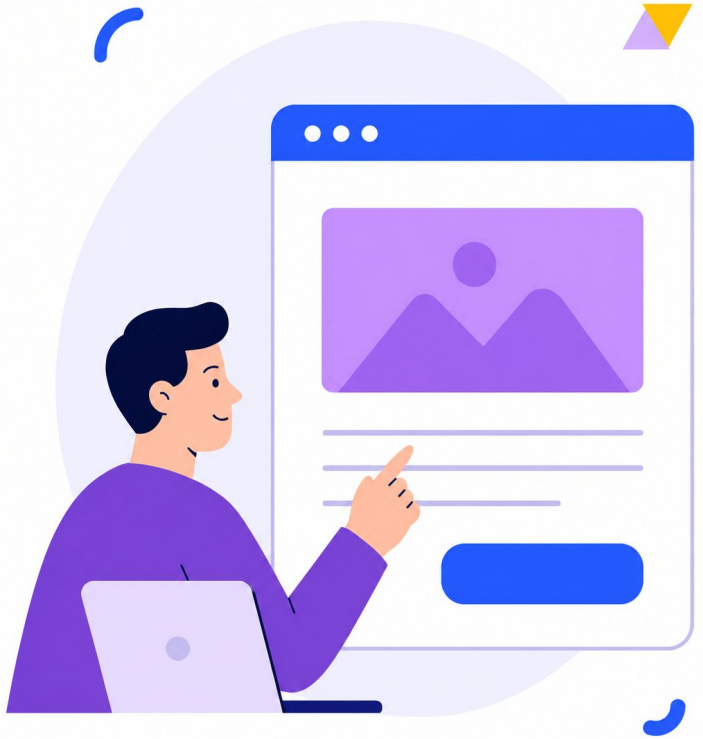

Increase value, get referrals, and scale sustainably.

Reminder: Acquisition

- SEO
- Paid Ads
- Social Media
- Content
- Partnerships
- Referral
- Influencers

UX, CRO and Landing Page Strategy

After this session you will be able to

- Design **landing pages** that support business goals
- Understand how **users think, behave**, and **make decisions**
- Identify and **reduce friction in the customer journey**
- **Improve conversion** rates using UX and CRO principles
- Optimize digital experiences through **testing and data**

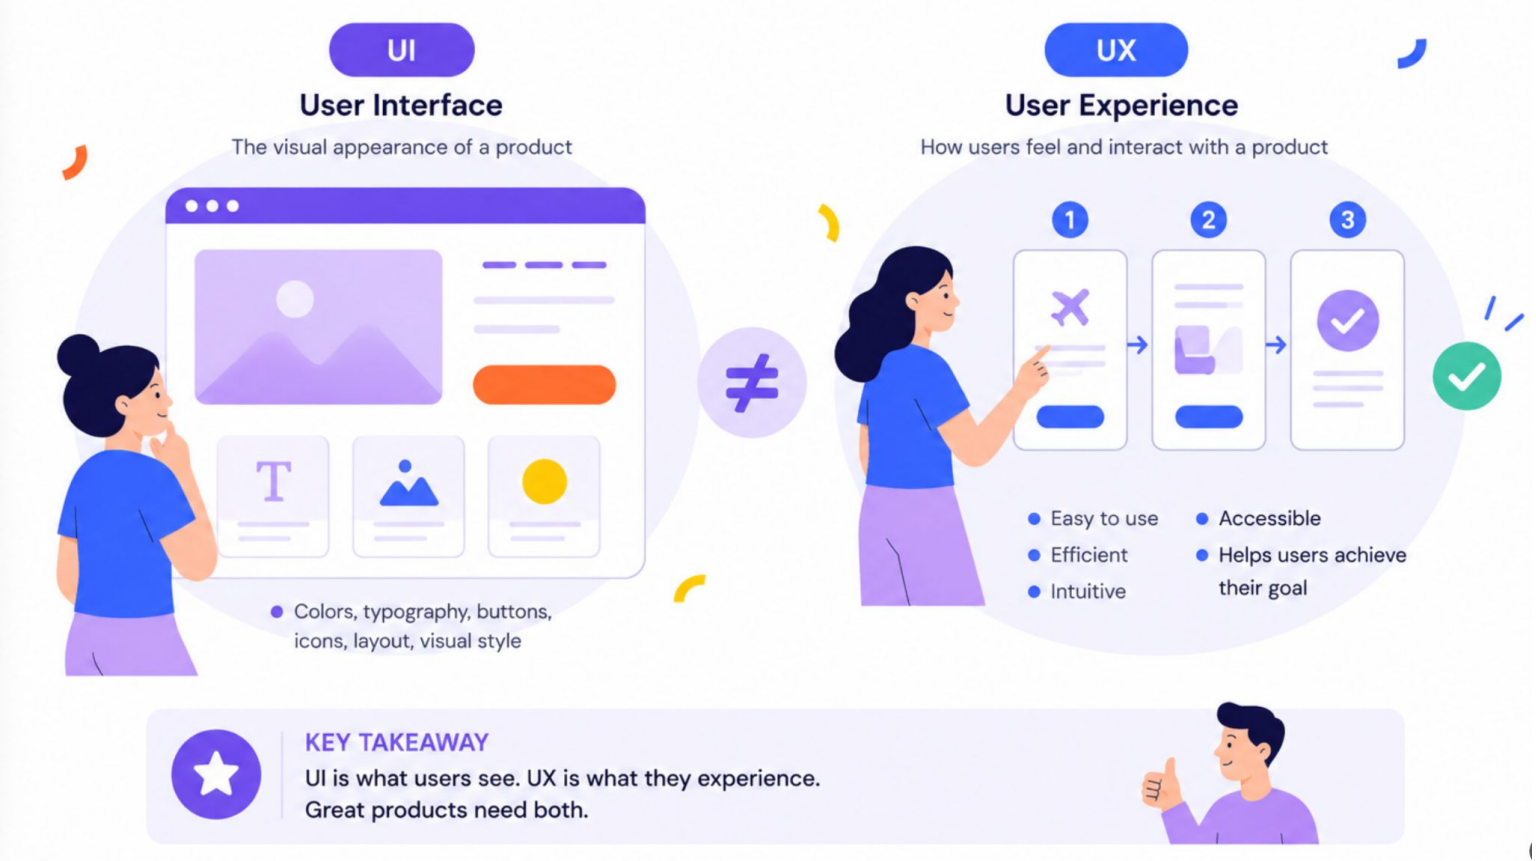

What makes you leave a website immediately?

01

User
Experience

UX ≠ UI

UI
User Interface
The visual appearance of a product
Colors, typography, buttons, icons, layout, visual style
UX
User Experience
How users feel and interact with a product
1
2
3
Easy to use
Efficient
Intuitive
Accessible
Helps users achieve their goal
KEY TAKEAWAY
UI is what users see. UX is what they experience.
Great products need both.

UX vs UI

UX

User Experience

- Solves user problems
- Focuses on user behaviour and usability
- Measures user satisfaction

≠

UI

User Interface

- Creates visual appeal
- Focuses on aesthetics
- Shapes first impressions

Principles of Great UX

Clarity

Users immediately understand what you offer and what to do next.

Simplicity

Remove unnecessary elements and focus on what truly matters.

Consistency

Use familiar patterns and maintain a consistent experience across pages.

Accessibility

Design for everyone, including users with disabilities and different devices.

Trust

Build confidence with reliable information, social proof and secure experiences.

Speed

Fast loading and smooth interactions keep users engaged and satisfied.

Mini Exercise

Why do millions of people trust Airbnb to book accommodation?

- App that looks beautiful or easy booking?

If Airbnb kept its beautiful design but removed reviews and made booking confusing, would you still use it?

UX or UI?

Logement entier : appartement - Huai Khwang, Thaïlande
2 voyageurs · 1 chambre · 1 lit · 1 salle de bain

Coup de cœur voyageurs | Un des logements préférés des voyageurs sur Airbnb | 4,94 ★★★★★ | 34 Commentaires

Hôte : Jack
Superhôte · Hôte depuis 1 an

Pour vos moments en plein air
Les éléments suivants sont parfaits pour vos voyages en été : lits de bronzage et piscine.

Pour rester au frais
Restez au frais grâce aux éléments suivants : climatisation et ventilateur de plafond.

Arrivée autonome
Vous pouvez entrer dans les lieux avec une boîte à clé sécurisée.

Votre prix est inférieur à la moyenne sur 60 jours

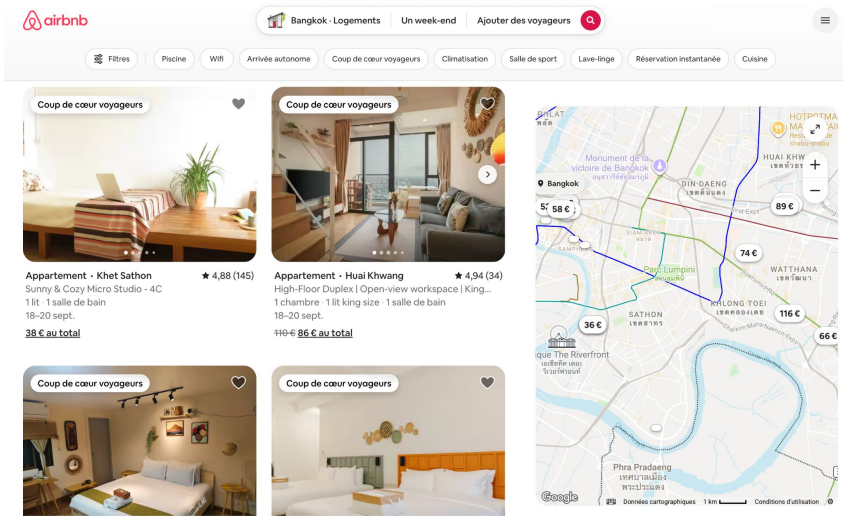

~~110 €~~ **86 € au total**

High-quality property photos, Search filters, Color palette, Guest reviews, Typography, Interactive map, Large “Reserve” button, Simple checkout process

02
Conversion

Conversion Funnel: The AIDA model

Bounce Rate

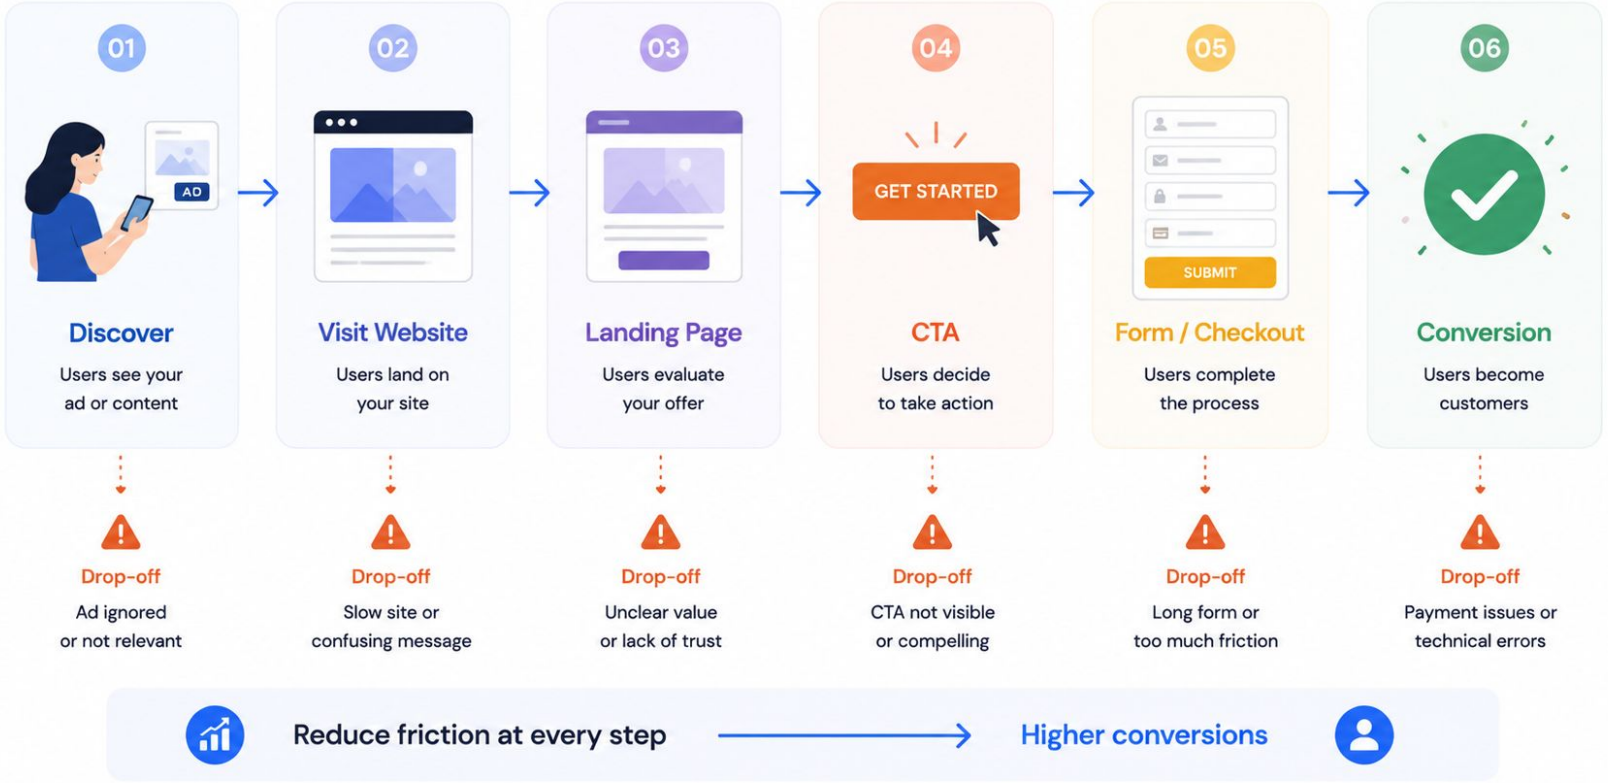

Bounce rate is the percentage of visitors who land on a website and leave without viewing any other pages or taking an action.

Conversion Funnel

Customer Journey & Drop-off

Improving Landing Page Conversion

Element	Why It Matters	Example
🎯 **Value Proposition**	Clearly communicates why users should choose your product.	“Learn Italian with 10-minute daily lessons.”
🔘 **Call-to-Action (CTA)**	Guides users toward the next step.	“Start Free Trial” instead of “Submit”.
⭐ **Trust Signals**	Reduces uncertainty and builds confidence.	Reviews, ratings, customer logos, secure payment badges.
📝 **Form Length**	Reduces friction and increases completion rates.	Ask only for essential information.
⚡ **Page Speed**	Prevents users from abandoning the page.	Fast-loading pages improve both UX and conversions.

Before Spending More on Advertising, Ask:

- Is our value proposition clear?
- Is the CTA visible and compelling?
- Do visitors trust us?
- Can we simplify the form?
- Does the page load quickly?

Mini Exercise

A landing page receives:

- 5,000 visitors
- 250 sign-ups

Question:

- What is the conversion rate?
- Where would you look for improvement?

First Impression Economics

Visitors decide within seconds whether to stay or leave. Their first impression is shaped by:

Clear value proposition

“I immediately understand what this product or service offers.”

Professional design

Creates credibility and trust.

Relevant visuals

Help visitors quickly recognize the product and target audience.

Fast loading speed

Slow pages increase abandonment.

Simple navigation

Makes it easy to know what to do next.

Visible call-to-action (CTA)

Clearly guides the next step.

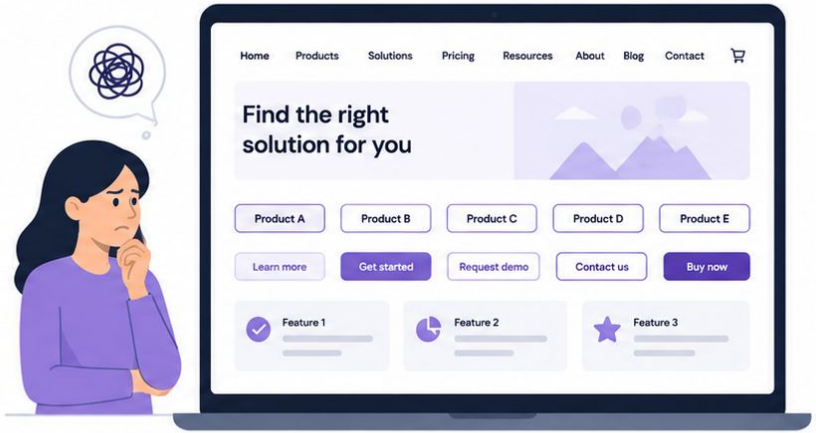

Trust signals

Reviews, testimonials, customer logos, security badges, or certifications reduce uncertainty.

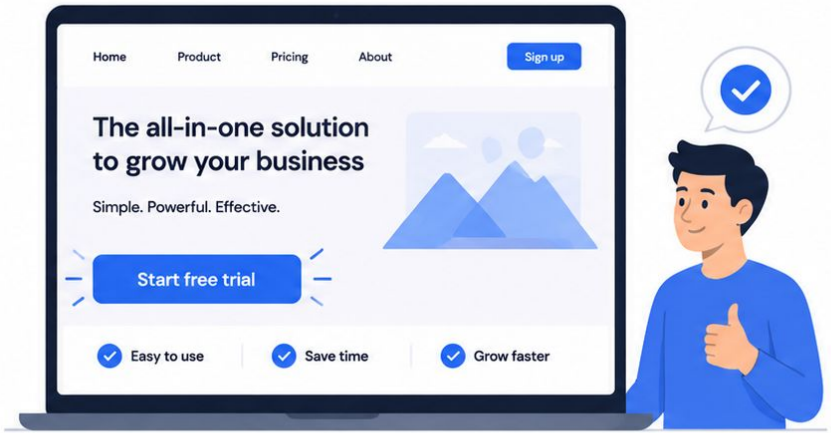

Consistent branding

Reinforces professionalism and confidence.

Hick’s Law

More choices = More thinking = Less action

Fewer choices = Less thinking = More action

Value Proposition

A strong value proposition answers:

- What is this?
- Who is it for?
- Why is it useful?
- Why is it different?

Bad example: “We revolutionize digital innovation.”

Good example: “AI-powered budgeting for international students.”

CTA

Examples:

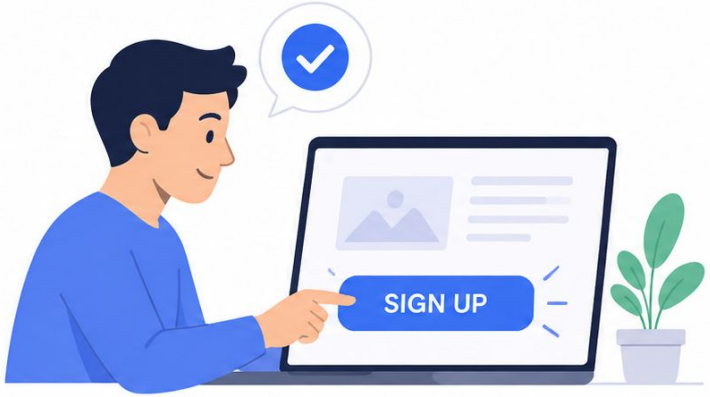

- Start free trial
- Book demo
- Download app
- Join waitlist

The CTA must be: **visible, simple, action-oriented, aligned with user intent**.

Too many CTAs create confusion. One page = one primary objective.

Fitts' Law

Small Button (hard to click) → More Precision Required → Slower Interaction → Lower Conversion

Large Button (easy to click) → Less Precision Required → Faster Interaction → Higher Conversion

Less effort → Better UX → Higher conversions

Trust and Social Proof

“Can I trust this?”

Examples:

- reviews
- testimonials
- ratings
- client logos
- user numbers

Especially important for: fintech, health, expensive products, unknown brands.

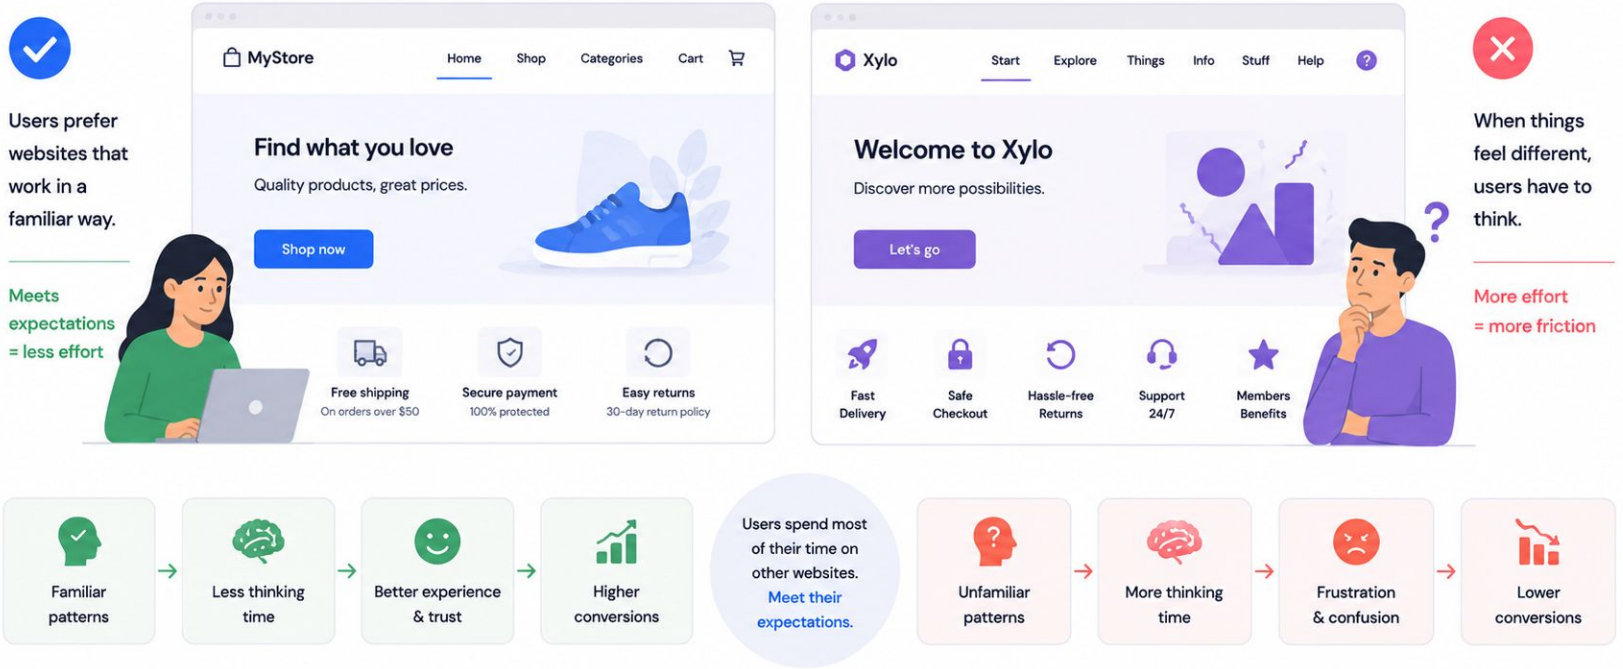

Friction

Small frictions destroy conversion.

Examples of friction:

- slow loading
- too many steps
- forced account creation
- confusing navigation
- hidden pricing
- long forms
- unclear checkout
- excessive popups

Jakob’s Law

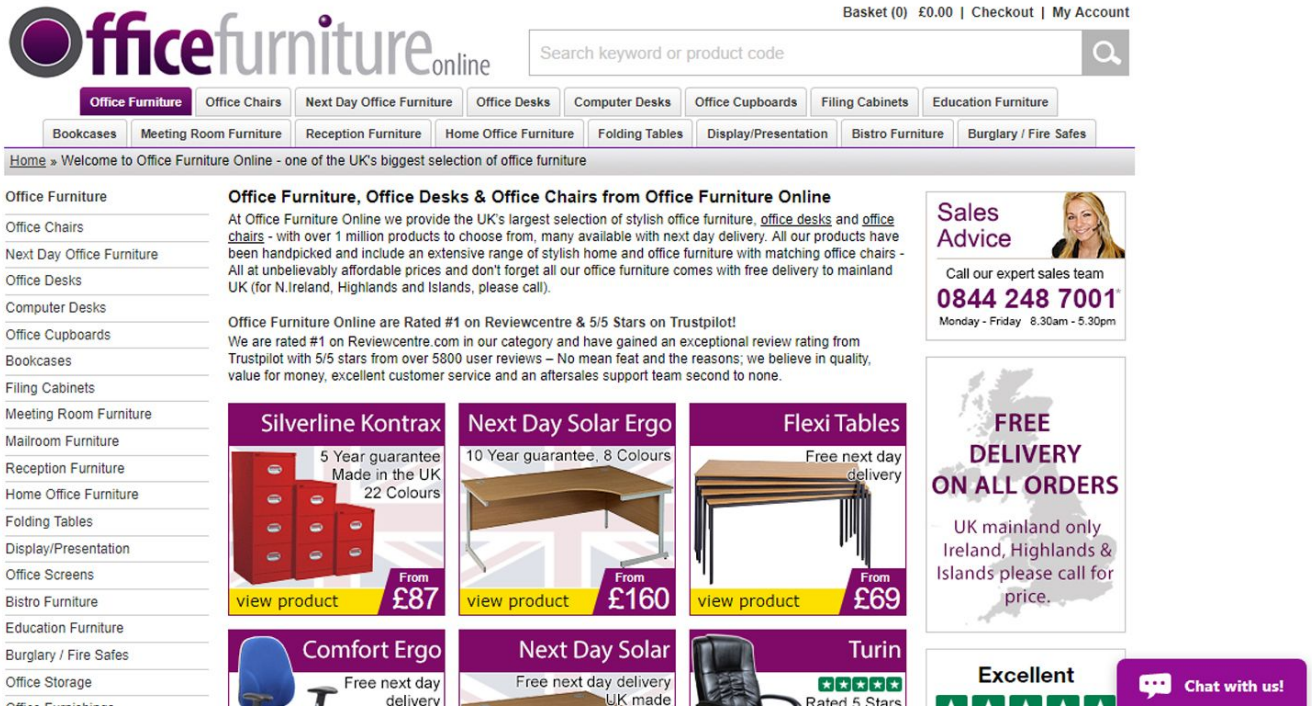

Users prefer websites that work in a familiar way.
Meets expectations = less effort

Members Benefits
When things feel different, users have to think.
More effort = more friction
Familiar patterns
Less thinking time
Better experience & trust
Higher conversions
Users spend most of their time on other websites. Meet their expectations.
Unfamiliar patterns
More thinking time
Frustration & confusion
Lower conversions

Case Study

UX Planet

Case Study

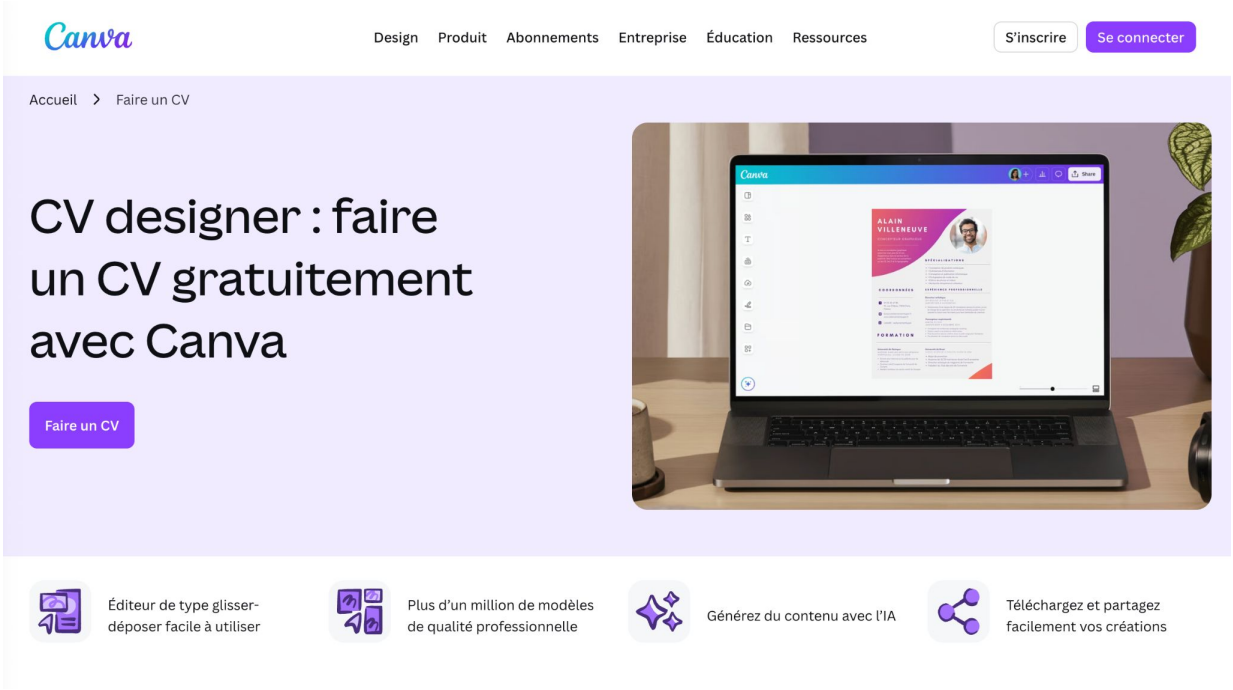

Webdesignledger

Case Study: Hello Fresh

https://www.hellofresh.fr/

Case Study: Canva

https://www.canva.com/fr_fr/creer/cv/

Landing Page vs Home Page

Homepage

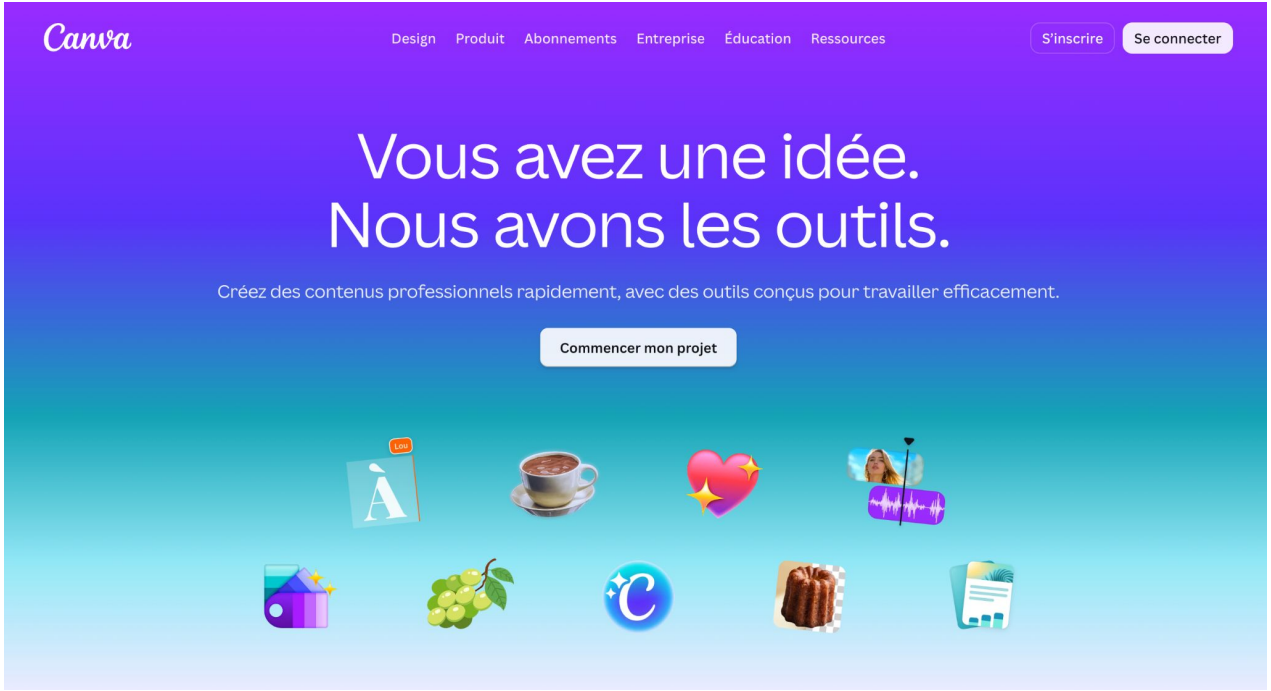

- broad
- multiple goals
- navigation heavy

Landing Page

TARGETED

- focused
- one goal
- conversion oriented

Case Study: Canva

https://www.canva.com

BAD LANDING PAGE

Unclear value proposition
It's not immediately clear what is offered.

Multiple competing CTAs
Too many choices confuse users and reduce focus.

Too much text
Large paragraphs are hard to read and scan.

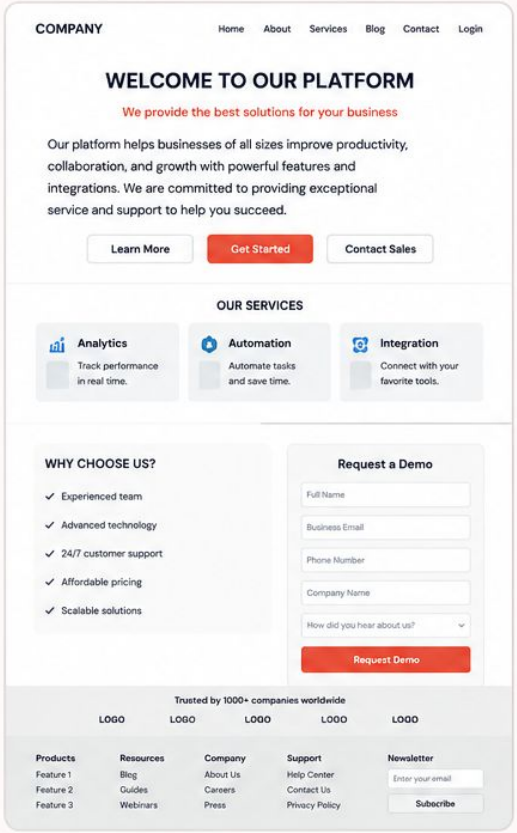

Cluttered layout
No clear visual hierarchy, too many distractions.

Slow loading
Users may leave before the page loads.

No trust signals
No reviews, logos or guarantees to build confidence.

Long, complex forms
Asking for too much information creates friction.

Confusing navigation
Too many links pull users away from the goal.

GOOD LANDING PAGE

Clear value proposition
The headline clearly communicates the benefit.

One primary CTA
A single, obvious action guides the user.

Concise & scannable
Short text, strong hierarchy and easy to read.

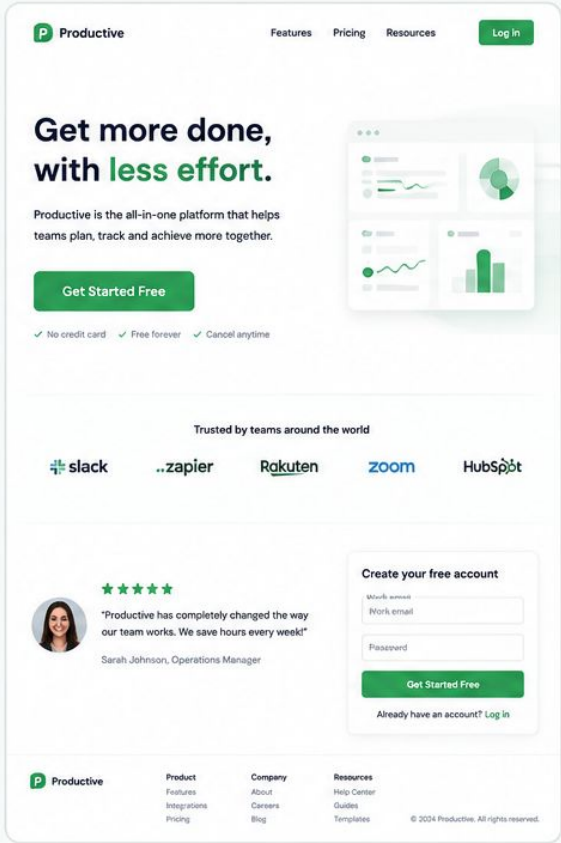

Clean layout
Plenty of white space and clear visual flow.

Fast loading
Optimized for speed and better experience.

Trust signals
Reviews, logos and guarantees build credibility.

Short, simple forms
Only essential information is requested.

Focused navigation
Minimal links keep users on the right path.

Mobile first *Approach*

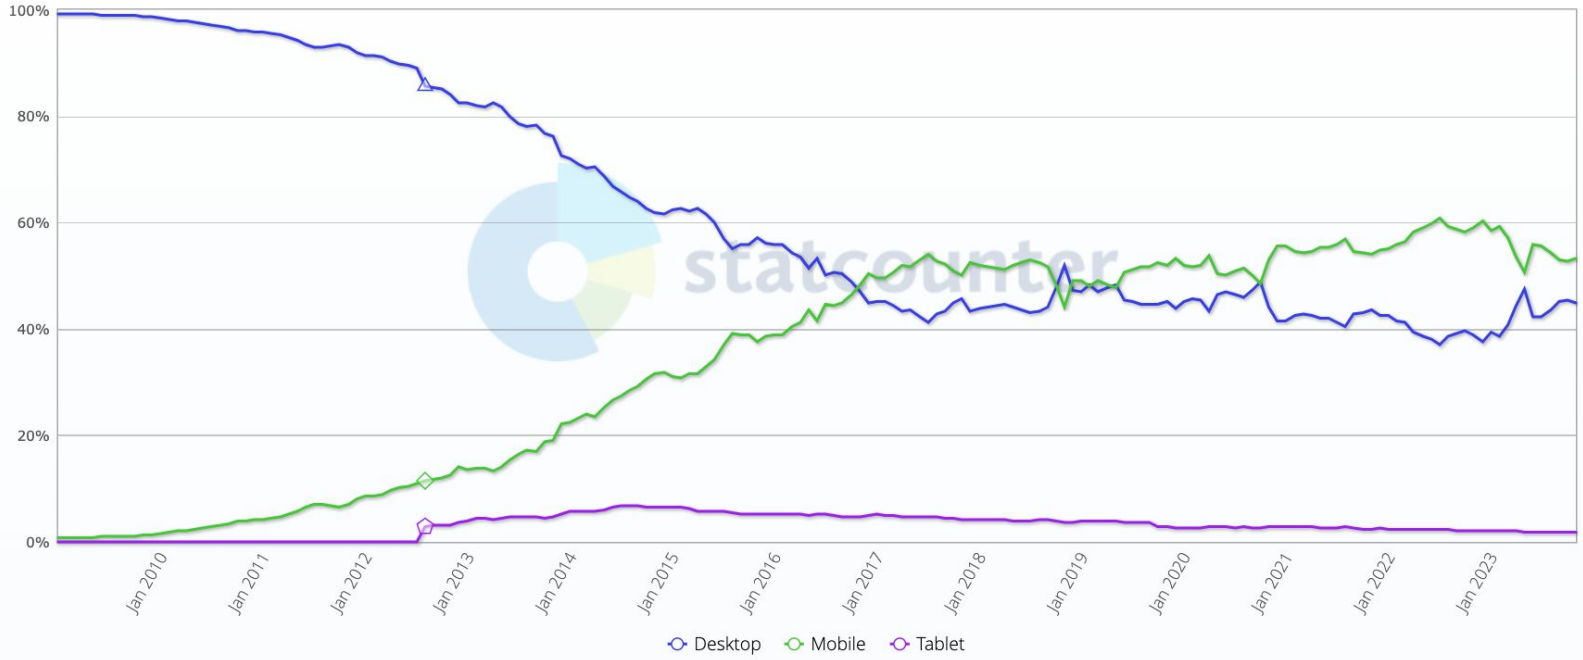

Mobile	Desktop	Tablet
52.7%	45.52%	1.77%

Desktop vs Mobile vs Tablet Market Share Worldwide - October 2023

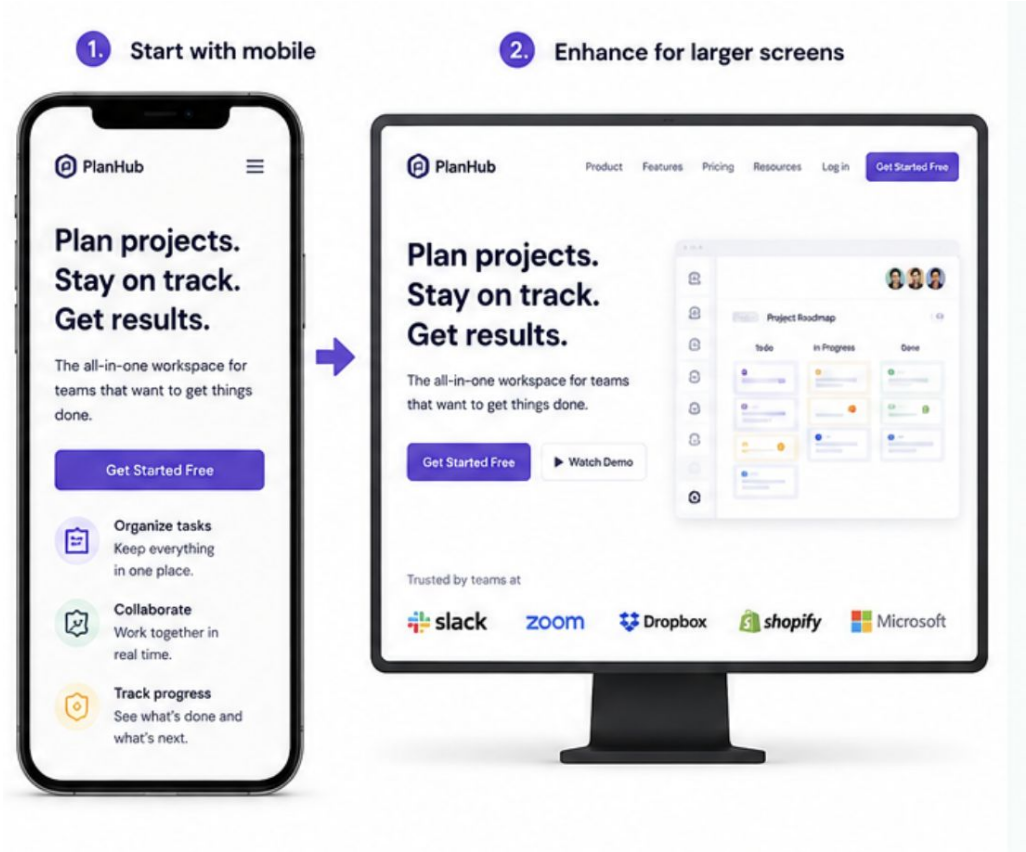

Desktop vs Mobile vs Tablet Market Share Worldwide

Jan 2009 - Nov 2023

Edit Chart Data

Mobile First Approach

Mobile First UX Principles

- **Prioritize essential content**: Show the most important information first.
- **Clear and visible CTA**: Make the primary action easy to find and tap.
- **Simple navigation**: Use intuitive menus and reduce unnecessary options.
- **Readable typography**: Large fonts and good contrast improve readability.
- **Touch-friendly design**: Large buttons with enough spacing prevent accidental taps.
- **Fast loading speed:** Compress images and minimize unnecessary elements.
- **Responsive layout**: Adapt seamlessly to different screen sizes.

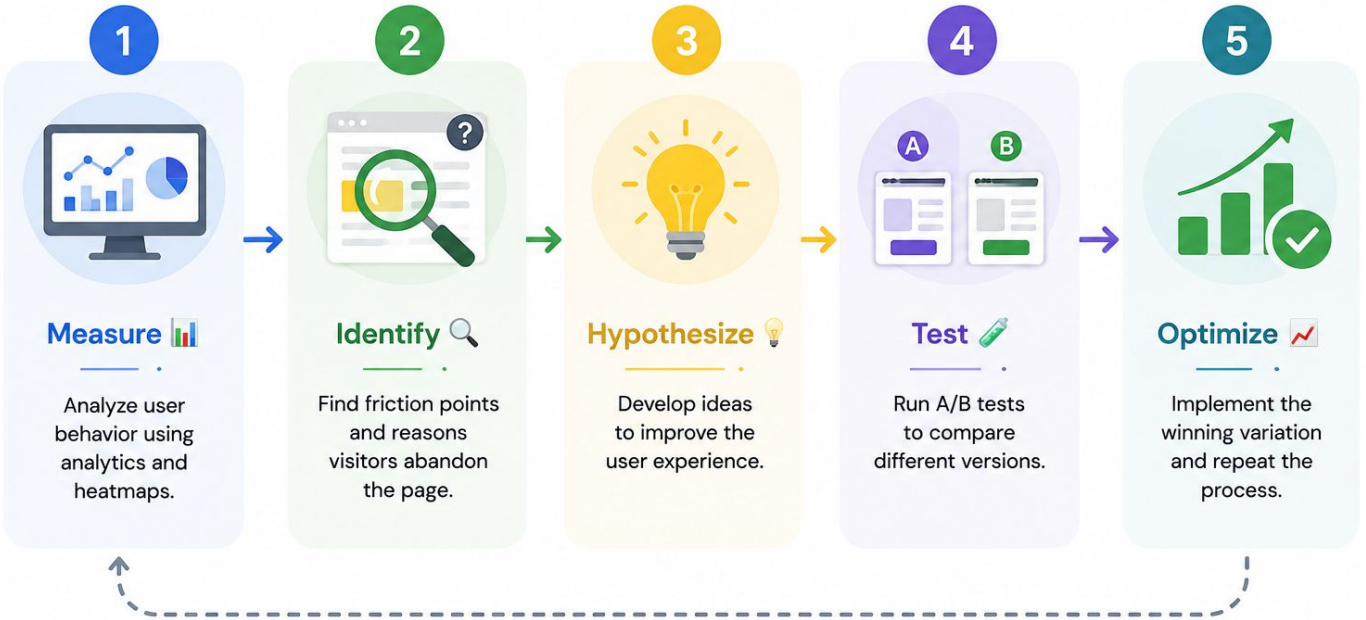

04

Conversion *Rate Optimization*

Conversion Rate Optimization (CRO)

Conversion Rate Optimization (CRO) is the process of improving a website or landing page to increase the percentage of visitors who complete a desired action, without increasing traffic.

A/B Testing

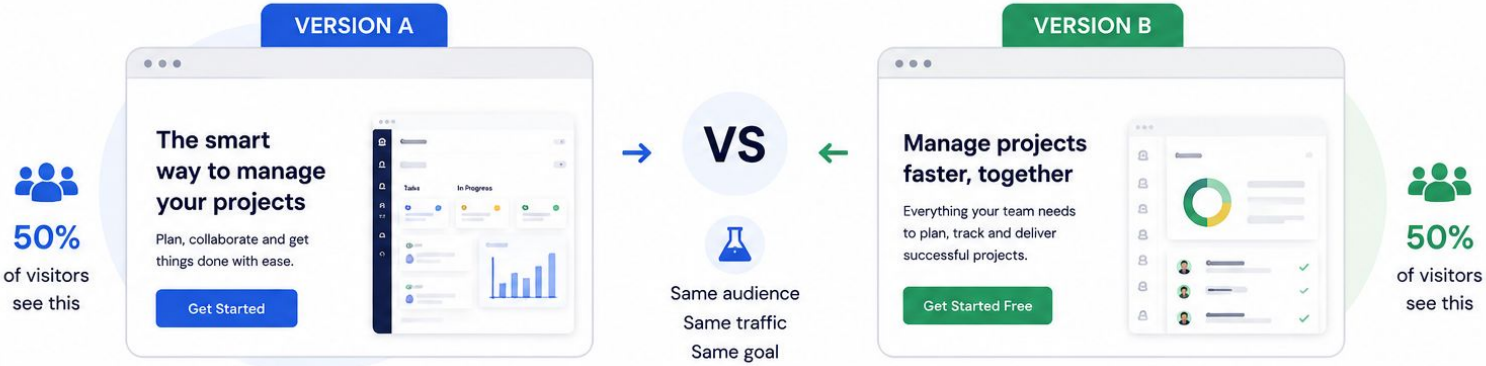

An A/B test compares two versions of the same webpage or app element to determine which performs better based on real user behavior.

What can be tested?

- Headlines
- Call-to-Action (CTA)
- Images
- Button color or placement
- Form length
- Page layout
- Product descriptions

VERSION A vs VERSION B

A/B Testing: Compare two versions to see which one performs better.

MEASURE	VERSION A	VERSION B	WINNER
CLICKS	1,120	1,380	VERSION B
SIGNUPS	145	182	VERSION B
PURCHASES	38	52	VERSION B
ENGAGEMENT (Avg. Time on Page)	1 min 42 s	2 min 18 s	VERSION B

KEY INSIGHT

Version B drives more clicks, more sign-ups, more purchases and higher engagement.

DECISION

Implement Version B and continue testing new ideas to keep improving.

RESULT

Better user experience
Higher conversions
More growth

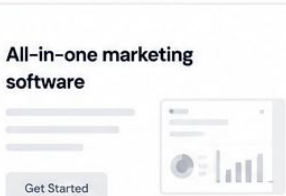

REMEMBER: Test one change at a time. Let the data guide your decisions.

HubSpot

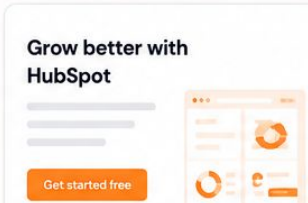

Complete website redesign & optimized "Get Started" flow

Redesigned the website and streamlined the path to sign up or request a demo.

BEFORE

AFTER

2X conversion rate

35% more demo requests

27% more product sign-ups

Booking.com

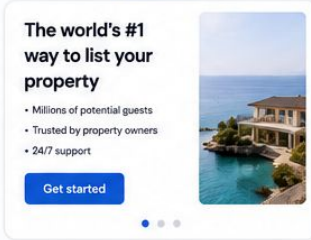

Landing page copy, social proof & registration flow

Tested different value propositions, social proof elements and simplified the registration flow.

BEFORE

AFTER

25% increase in property-owner registrations

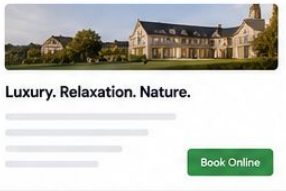

Lower customer acquisition cost

THE VINEYARD HOTEL

Moved "Book Online" CTA above the fold

The CTA button was moved higher on the page to increase visibility.

BEFORE

AFTER

32.12% increase in booking-page click-throughs

Cognitive Load

Cognitive load is the **mental effort required for users to understand and interact with a website or app**. When users must think too much, they are more likely to leave without taking action.

How to Reduce Cognitive Load?

- Keep layouts simple and uncluttered
- Limit the number of choices
- Use clear headings and visual hierarchy
- Group related information
- Highlight the primary CTA
- Use familiar icons and navigation patterns
- Break complex tasks into smaller steps

Dark Patterns

Dark patterns are user interface **designs that manipulate or pressure users into making decisions they might not otherwise choose**. They increase short-term conversions but often reduce trust, customer satisfaction, and long-term loyalty.

- Hidden Costs (Extra fees appear only at checkout)
- Pre-selected Options (Newsletter or insurance already checked)
- Confirmshaming (“No thanks, I don’t want to save money.”)
- Scarcity Messages (“Only 1 room left!” (when misleading))
- Roach Motel (Easy to subscribe, difficult to cancel)
- Disguised Ads (Ads designed to look like content or buttons)

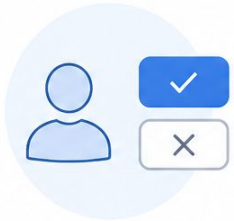

Short gains vs Long-term consequences

Ethical UX Principles

Be transparent

Clearly communicate what you offer, how it works, and what it costs.

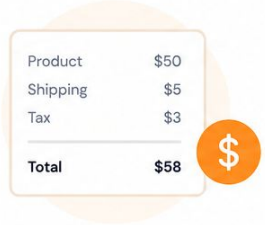

Give users real choices

Let users make informed decisions with easy-to-understand options.

Make cancellation as easy as sign-up

Don't create obstacles when users want to leave.

Clearly explain costs and conditions

No hidden fees. No surprises at checkout.

Respect user privacy

Collect only what you need and protect user data.

Design for trust, not manipulation

Build long-term relationships through honesty and respect.

How Users Make Decisions

Five core principles:

01

Attention is limited

02

People scan instead of read

03

Trust reduces perceived risk

04

Emotions drive action

05

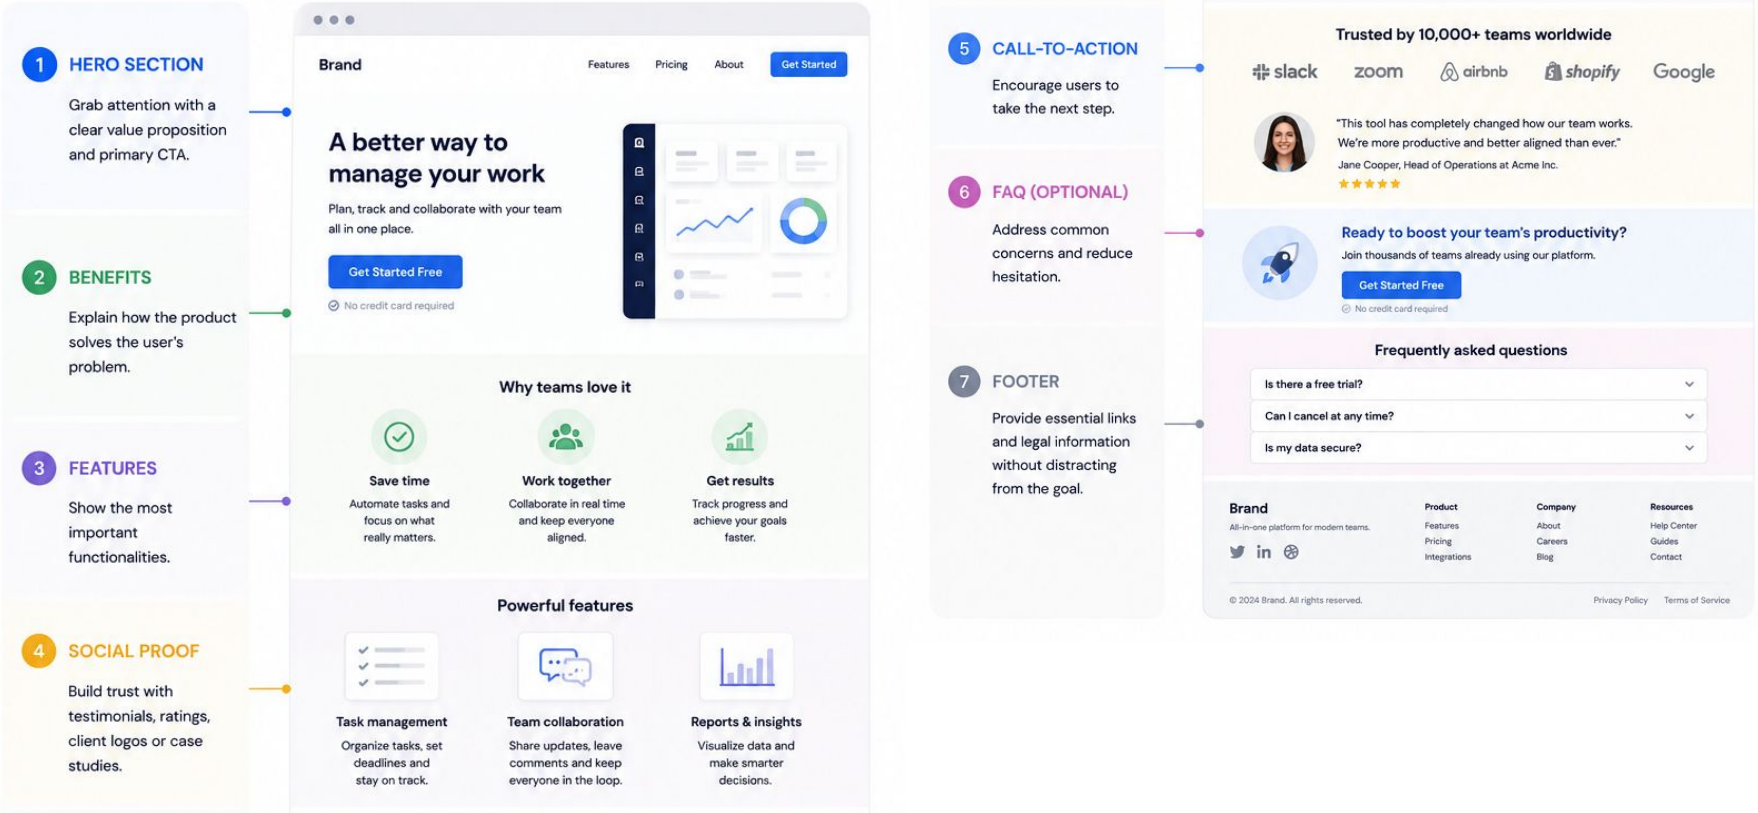

Simplicity reduces effort

05

Landing Page *Structure*

Landing Page Structure

06

Key *Takeaways*

Key Takeaways

01

UX impacts business performance

Better experiences lead to happy users, loyalty, and growth.

02

Conversion depends on clarity & trust

Users convert when they understand the value and feel confident.

03

Landing pages are strategic tools

They focus attention, communicate value, and drive action.

04

Friction kills conversion

Every extra step, delay, or confusion increases the chance of drop-off.

05

CRO relies on experimentation

Test, learn, and optimize continuously to improve results.

Great UX + Smart CRO = More conversions, happier users, better business results.

Thanks!
